Gas/Liquid Separators

Type 31L-ST Compact Series

FEATURES

- Lightweight, Compact
- Removes 99% of Liquid and Solid Entrainment Particles Larger Than 10 Microns
- Integral Trap
- High Efficiency Over Wide Flow Range
- No Required Maintenance
- Economical Choice for Most Applications
- Gas, Steam, or Air Applications

OPTIONS

• Trap Heater

Eaton Type 31L-ST Gas/Liquid Separators automatically remove 99% of all liquid and solid entrainment particles 10 microns in size or larger from air, gas, and steam processes.

Low Profile Design

The Type 31L-ST is a horizontal, in-line separator. It is very compact and can be supported by the line in which it is installed. No cumbersome, expensive support stands are required.

The compact design of these separators takes up little more than the space of the pipeline– an important consideration in space-restricted applications.

Vortex Containment Plate

Moisture-laden gas enters the inlet of the separator, where it is deflected by a unique Cenpellar™ into a centrifugal motion. The entrained solids and moisture droplets are then separated out by a reduction in velocity where they fall into the separator's integral drain trap. The exclusive Eaton Vortex Containment Plate (VCP) ensures they cannot be re-entrained. The VCP is constructed with a series of carefully placed rings and plates that shield the separated liquid from the vortex action within the separator to prevent re-entrainment. The VCP

also helps direct the liquid to the drain trap while at the same time moving the clean, dry gas to the separator outlet. With Eaton's exclusive VCP, the need for expensive, delicate baffles used in ordinary separators is eliminated.

Integral Drain Trap

Eaton Type 31L-ST Separators come with standard integral drain traps. This design saves space, reduces installation costs, and eliminates the need to size and source a properly designed drain trap to work with the separator. The integral trap automatically ejects condensate at predetermined levels without loss of line pressure. Internal trap parts are made of stainless steel and include a non-magnetic 18-8 stainless steel valve and seat. Removal of a flange releases the trap mechanism for inspection. A heater option, Type STH, is also available for applications below freezing. A 50 watt, 120 volt, self-limiting heating element keeps the reservoir fluid from freezing. The heater does not increase the line temperature and can be easily removed for inspection.

Engineering Specifications

All gas/liquid separators are constructed of cast iron with threaded or flanged connections.

- Sizes 1" to 4"
- Horizontal Low Profile Design
- Centrifugal In-line Installation
- Threaded or Flanged
- Iron Construction
- ent Plate also helps direct t to the drain trap v enters the come time m
